

# Networking and innovation

2 day workshop in Ghent, Belgium  
18-19th of March

Nele Vanslebrouck  
Personal review

# In numbers

- 76 participants
  - 23 nationalities
  - NSU, MA, ngo's, farmers organisations, paying agencies, advisory groups, other public bodies
  - Also: DG AGRI, ENRD Contact Point, EIP Service Point
- ⇒ Nice atmosphere, good cooperation, good participation
- Plenary presentations, World Café, 3 workshops, plenary feedback, Open Space

# Aims ?

- Detect the playing field of innovation / EIP and NSU:
  - What do we have to do?
  - How do we have to do it?
  - When do we have to do it?
  - Who has to do it?
- ° Common understanding of how RN can promote a culture of innovation between the rural stakeholders: clarification of our role(s)
- Find out the added value of cooperation between ENRD CP, EIP SP, RN (and EC)
- Get inspired by relevant practices
- Identify activities that can be put in the real action plans of the RN

# Playing field ?

- 1 structure at EU-level to strengthen each other
- EIP works like: Problem > solution? > find partners via network > further design > find funding > develop idea & spread results (a.o. by network)
- EIP AGRI SP: web-based platform, databasesn, incl. Horizon 2020
- LAGS = part of strategy that covers time frame >< EIP OG: 1 problem, 1 task/solution, 1 group, limited in time
- Task RN to “foster innovation” on EIP=
  - collect information
  - have an EIP OG-network (structure free)
  - organise training & networking activities for advisors, innovation support services, researchers
  - Optional: cross-border, innovation support service
- EIP SP asks RN to: take part in focus groups, propose experts, disseminate calls and information, motivate public, disseminate results e.g. by publishing in newsletters

Flemish example: call, selection criteria, 10% own financing, °EIP “network” part of Flemish Rural Network as sub-group together with MA and Platform for Agricultural Research in Flanders

# What can RN do? Tools?

- First: understand the context: needs assessment (know who & what, needs, gaps, objectives, ...) => identify where RN can bring added value (e.g. by focus groups) + put it in planning
- Build inventories, lists & databases, make information available and comprehensive
- Provide information, share experience, raise awareness
- Connect and engage stakeholders, actors, ... on defined topics
- Demonstrate: demo, events, ...

## Keep in mind:

- Work on different levels (local, regional, national, EU)
- Language is important, also the farmers' language
- Trust from the MA, trust from the farmers
- Keep it open to all innovation in rural areas (not EIP only)
- And: try to explain it without using the word innovation!
